Anatomy is the study of the structure and relationship between body parts. Physiology is the study of the function of body parts and the body as a whole. Some specializations within each of these sciences follow: Gross (macroscopic) anatomy is the study of body parts visible to the naked eye, such as the heart or bones.

## **What Is Anatomy and Physiology? - CliffsNotes**

Anatomy and physiology are two related biology disciplines. Many college courses teach them together, so it's easy to be confused about the difference between them. Simply put, anatomy is the study of the structure and identity of body parts, while physiology is the study of how these parts function and relate to one another.

## **Difference Between Anatomy and Physiology**

Physiology: The study of the functions of the human body; Gross anatomy: The study of the parts and structures of the human body that can be seen with the naked eye and without the use of a microscope; Microscopic anatomy: The study of the parts and structures of the human body that can NOT be seen with the naked eye and only seen with the use of a microscope
