The stoichiometry of a reaction describes the relative amounts of reactants and products in a balanced chemical equation. A stoichiometric quantity of a reactant is the amount necessary to react completely with the other reactant (s). If a reactant remains unconsumed after complete reaction has occurred, it is in excess.

In ideal Stoichiometry □ All reactants are converted into products. Common Methods for solving all Stoichiometry Problems: Mass-Mass Problems: 1. Start with a known mass of reactant or product and find an unknown mass of another reactant or product. 2. All other stoichiometry problems are derivations (shortened versions) of this larger solution:
