Mitigation and Adaptation | Solutions - Climate Change ...

Climate change mitigation consists of actions to limit the magnitude or rate of global warming and its related effects. This generally involves reductions in human emissions of greenhouse gases (GHGs).. Fossil fuels account for about 70% of GHG emissions. The main challenge is to eliminate the use of coal, oil and gas and substitute these fossil fuels with clean energy sources.

Climate change mitigation - Wikipedia

Geneva, 28 November 2014 - Working Group III of the Intergovernmental Panel on Climate Change is launching the full version of its contribution Climate Change 2014: Mitigation of Climate Change to the IPCC Fifth Assessment Report in its final format. As the UNFCCC Climate Change Conference prepares to open in Lima, Peru, the IPCC is publishing its assessment of the relevant options for ...

2014 - IPCC

Climate change mitigation is achieved by limiting or preventing greenhouse gas emissions and by enhancing activities that remove these gases from the atmosphere. Greenhouse gases can come from a range of sources and climate mitigation can be applied across all sectors and activities.
