Readable and usable in style and valuable in approach, this text provides the practical and succinct advice that students and practitioners need, rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, the author applies corporate finance to real companies. The new Third Edition has four real-world core companies to study and follow. Perfected suited for MBA programs' corporate finance and equity valuation courses, all business decisions are classified into three groups: the investment, financing, and dividend decisions.

The theme of this volume is "Dealing with Volatility and Enhancing Performance". During a time when there is much concern about the perceived volatility of global equity markets, the insights offered here could be reassuring as well as useful.

Based on papers from the 4th Business Systems Laboratory International Symposium (BSLAB) in 2016, this volume contributes to the business management, organizational and innovation literature by providing insights on the antecedents of systems thinking in the business systems domain. The Business Systems Laboratory International Symposium addresses current global economic and social challenges from a systemic perspective, drawing from the domains of management, economics, engineering and sociology. In particular, the 2016 Symposium focuses on the epistemological, theoretical, methodological, technical and practical contributions that represent advancements in the theory and practice of governing business systems to address present and future challenges in the global economy. The contributions explore the application of systems thinking to governance, involving the introduction of new administrative organizational and managerial activities aimed toward organizational innovation and control.
