Computed tomography is an imaging procedure that uses special x-ray equipment to create detailed pictures, or scans, of areas inside the body. It is sometimes called computerized tomography or computerized axial tomography (CAT). The term tomography comes

Download File PDF Dc Ct T T X

from the Greek words tomos (a cut, a slice, or a section) and graphein (to write or record).

Each picture created during a CT procedure shows the organs, bones, and other tissues in a thin "slice" of the body.

$\frac{dC}{dt} = -kC$, which is what we started with. What about the half-life $t_{1/2}$? The half-life gives us an idea of how long the drug will stay in the body. Would we expect the $t_{1/2}$ to be dependent or independent of the drug concentration? Recall that $t_{1/2}$ of a drug is the time required for half of the drug to go away.
