26 June 2013 by Tejvan Pettinger Containerisation is a system of standardised transport, that uses a common size of steel container to transport goods. These containers can easily be transferred between different modes of transport - container ships to lorries and trains. This makes the transport and trade of goods cheaper and more efficient.

Containerisation - Economics Help

Containerization is an important cargo-moving technique developed in the 20th century. Road-and-rail containers, sealed boxes of standard sizes, were used early in the century; but it was not until the 1960s that containerization became a major element in ocean shipping, made possible by new ships specifically designed for container carrying.

Containerization | transport | Britannica

This book deals with the revolution of containerization, a breakthrough in maritime transport. Until World War II, maritime transport and transshipment of general cargo had been virtually unchanged. .
