Social history, sometimes described as the 'history of the people', or 'history from below', emerged as an alternative to conventional political history, both in terms of its objects of interest and its belief in deeprooted economic and social factors as agents of historical change. Social and economic history have always overlapped, and in the inter-war years the LSE promoted the growth of both.

The Belgian historian attempts an international viewpoint in this general history of the social and economic evolution in Western Europe  
This book examines the most important themes in European social and economic history from the beginning of growth around the year 1000 to the first wave of global exchange in the 1490s. These five hundred years witnessed the rise of economic systems, such as capitalism, and the social theories that would have a profound influence on the rest of the world over the next five centuries. The basic story, the human search for food, clothing, and shelter in a world of violence and scarcity, is a familiar one, and the work and daily routines of ordinary women and men are the focus of this volume. Surveying the full extent of Europe, from east to west and north to south, Steven Epstein illuminates family life, economic and social thought, war, technologies, and other major themes while giving equal attention to developments in trade, crafts, and agriculture. The great waves of famine and then plague in the fourteenth century provide the centerpiece of a book that seeks to explain the causes of Europe's uneven prosperity and its response to catastrophic levels of death. Epstein also sets social and economic developments within the context of the Christian culture and values that were common across Europe and that were in constant tension with Muslims, Jews, and dissidents within its boundaries and the great Islamic and Tartar states on its frontier.

History and Economic Life offers students a wide-ranging introduction to both quantitative and qualitative approaches to interpreting economic history sources from the Middle Ages to the Twentieth Century. Having identified an ever-widening gap between the use of qualitative sources by cultural historians and quantitative sources by economic historians, the book aims to bridge the divide by making economic history sources more accessible to students and the wider public, and highlighting the need for a complementary rather than exclusive approach. Divided into two parts, the book begins by equipping students with a toolbox to approach economic history sources, considering the range of sources that might be of use and introducing different ways of approaching them. The second part consists of case studies that examine how economic historians use such sources, helping readers to gain a sense of context and understanding of how these sources can be used. The book thereby sheds light on important debates both within and beyond the field, and highlights the benefits gained when combining qualitative and quantitative approaches to source analysis. Introducing sources often avoided in culturally-minded history or statistically-minded economic history courses respectively, and advocating a combined quantitative and qualitative approach, it is an essential resource for students undertaking source analysis within the field.

An Economic and Social History of the Netherlands, 1800 – 1920 provides a comprehensive account of Dutch history from the late eighteenth to the early twentieth century, examining population and health, the economy, and socio-political history. The Dutch experience in this period is fascinating and instructive: the country saw extremely rapid population growth, awesome death rates, staggering fertility, some of the fastest economic growth in the world, a uniquely large and efficient service sector, a vast and profitable overseas empire, characteristic 'pillarization', and relative tolerance. Michael Wintle also examines the lives of ordinary people: what they ate, how much they earned, what they thought about public affairs, and how they wooed and wed. This book will be of central importance to Dutch specialists, as well as European historians more generally.

This is the ideal companion text to A Political History of Western Europe Since 1945. It is an introductory survey which explains how western Europe built up its postwar prosperity and is moving towards continental integration. Themes treated include: the origins of the EC; consumerism; youth culture and protest; immigration; the oil crisis and its aftermath; and the contrasting experience and expectations of the Nordic world and the Mediterranean south. The book ends with the consequences of Soviet collapse. Designed for general history students, it assumes no formal knowledge of economics, and is notably accessible and user-friendly in its approach.

This is the first complete economic and social history of Brazil in the modern period in any language. It provides a detailed analysis of the evolution of the Brazilian society and economy from the end of the empire in 1889 to the present day. The authors elucidate the basic trends that have defined modern Brazilian society and economy. In this period Brazil moved from being a mostly rural traditional agriculture society with only light industry and low levels of human capital to a modern literate and industrial nation. It has also transformed itself into one of the world's most important agricultural exporters. How and why this occurred is explained in this important survey.
