Energy & Environmental Policy. Water resources are increasingly contested in nearly all parts of the world. Available freshwater supplies have declined nearly 40% since 1970, and the UN predicts that, by 2025, 1.8 billion people will not have sufficient water to meet all of their daily needs. Water conflict is essentially a political problem because it reflects normative disagreements about who has the authority to define its value and appropriate uses.

The impacts of new dams and diversions are felt across borders, and the development of new water infrastructure can increase political tensions in transboundary river basins. International water treaties and river basin organizations serve as a framework to potentially deescalate hydro-political tensions across borders.

For a long time, the literature on water politics has focused on the possibility of water wars between countries. Scott Moore calls attention to the fact that no such major war has yet happened, and that most international conflicts over water have been resolved diplomatically, thanks to several international organizations that have facilitated formal cooperation agreements between countries.
