The present study designed to identify the most common fungal pathogens associated with root diseases in *Phaseolus vulgaris*, *Vigna unguiculata*, *V. radiata* and *Vicia faba*.

Specific objectives include: (1) to identify fungal species associated with root diseases of the four crops using morphological and molecular tools; and (2) to test pathogenicity of the most common fungal species.

fungi and ...

Since the first edition of *Identification of Pathogenic Fungi*, there has been incredible progress in the diagnosis, treatment and prevention of fungal diseases: new methods of diagnosis have been introduced, and new antifungal agents have been licensed for use. However, these developments have been offset by the emergence of resistance to several classes of drugs, and an increase in infections caused by fungi with innate resistance to one or more classes.

Molecular identification of pathogenic fungi.

IDENTIFICATION OF PATHOGENIC FUNGI, BRISTOL. THE COURSE IS DESIGNED FOR BEGINNERS AND THOSE WITH SOME EXPERIENCE IN THE IDENTIFICATION OF MEDICALLY IMPORTANT FUNGI. THE FIRST HALF-DAY WILL CONCENTRATE ON YEAST IDENTIFICATION, THE REMAINDER OF THE COURSE WILL FOCUS ON DERMATOPHYTES AND OTHER MOULDS ENCOUNTERED IN HOSPITAL MICROBIOLOGY LABORATORIES. IT WILL INCLUDE A NUMBER OF SPECIES FEATURED IN EXTERNAL QUALITY ASSESSMENT SCHEMES.
