"Too often cultural studies discourse seems cut off from wider developments in social theory. Women today are being instructed on how they can raise their self-esteem, love their inner child, survive their toxic families, overcome codependency, and experience a revolution from within. By holding up the ideal of a pure and happy inner core, psychotherapists refuse to acknowledge that a certain degree of unhappiness or dissatisfaction is a routine part of life and not necessarily a cause for therapy. Lesbians specifically are now guided to define themselves according to their frailties, inadequacies, and insecurities. An incisive critique of contemporary feminist psychology and therapy, *Changing our Minds* argues not just that the current practice of psychology is flawed, but that the whole idea of psychology runs counter to many tenets of lesbian feminist politics. Recognizing that many lesbians do feel unhappy and experience a range of problems that detract from their well-being, *Changing Our Minds* makes positive, prescriptive suggestions for non-psychological ways of understanding and dealing with emotional distress. Written in a lively and engaging style, *Changing our Minds* is required reading for anyone who has ever been in therapy or is close to someone who has, and for lesbians, feminists, psychologists, psychotherapists, students of psychology and women's studies, and anyone with an interest in the development of lesbian feminist theory, ethics, and practice.

Cultural Transmission covers psychological, developmental, social, and methodological research on how cultural information is socially transmitted from one generation to the next within families. Studying processes of cultural transmission may help analyze the continuity or change of cultures, including those that have to cope with migration or the collapse of a political system. An evolutionary perspective is elaborated in the first part of the book; the second takes a cross-cultural perspective by presenting international research on development and intergenerational relations in the family; the third provides intra-cultural analyses of mechanisms and methodological aspects of cultural transmission. Made up of contributions by experts in the field, this source book is intended for anyone with interests in cultural issues - especially researchers and teachers in disciplines such as psychology, social and behavioral sciences, and education - and for applied professionals in culture management and family counseling, as well as professionals dealing with migrants.

"If you want to know what anthropology is, look at what anthropologists do," write the authors of *Social and Cultural Anthropology: A Very Short Introduction*. This engaging overview of the field combines an accessible account of some of the discipline's guiding principles and methodology with abundant examples and illustrations of anthropologists at work. Peter Just and John Monaghan begin by discussing anthropology's most important contributions to modern thought: its investigation of culture as a distinctively human characteristic, its doctrine of cultural relativism, and its methodology of fieldwork and ethnography. Drawing on examples from their own fieldwork in Indonesia and Mesoamerica, they examine specific ways in which social and cultural anthropology have advanced our understanding of human society and culture. Including an assessment of anthropology's present position, and a look forward to its likely future, *Social and Cultural Anthropology* will make fascinating reading for anyone curious about this social science. About the Series: Combining authority with wit, accessibility, and style, *Very Short Introductions* offer an introduction to some of life's most interesting topics. Written by experts for the newcomer, they demonstrate the finest contemporary thinking about the central problems and issues in hundreds of key topics, from philosophy to Freud, quantum theory to Islam.

This book engages young scholars, teachers and students in a critical dialogue with past and present directions in cultural-historical studies. More particularly, it prepares prospective anthropologists, as well as readers interested in human cultures for understanding basic theoretical and methodological ethnographic principles and pursuing further what has been known as cultural anthropological perspectives. The book discusses key, field-based studies in the discipline and places them in dialogue with related studies in social history, linguistics, philosophy, literature, and photography, among others.

Every day around the world there are dozens of protests both large and small. Most groups engage the local police, some get media attention, and a few are successful. Who are these people? What do they want? What do they do to get it? What effects do they ultimately have on our world? In this lively and compelling book, James Jasper, an international expert on the cultural and emotional dimensions of social movements, shows that we cannot answer these questions until we bring culture squarely into the frame. Drawing on a broad range of examples, from the Women's Movement to Occupy and the Arab Spring, Jasper makes clear that we need to appreciate fully the protestors' points of view - in other words
