The formula for the area of a circle is an example of a polynomial function. The general form for such functions is P (x) = a0 + a1x + a2x2 +?+ anxn, where the coefficients (a0, a1, a2 ,…, an) are given, x can be any real number, and all the powers of x are counting numbers (1, 2, 3,…).

Almost every text I've seen begins with declaring that we should multiply by a test function and then integrate it as if it's an axiom. The author states that the motivation behind the weak form is the realization two vectors are equal if their inner products with some arbitrary test function is the same. Then the author continues on.
