~~Nuclear Medicine Technology Procedures And Quick Reference~~

As stated above, nuclear medicine scans may be performed on many organs and tissues of the body. Each type of scan employs certain technology, radionuclides, and procedures. A nuclear medicine scan consists of 3 phases: tracer (radionuclide) administration, taking images, and image interpretation.

~~Nuclear Medicine | Johns Hopkins Medicine~~

Nuclear medicine procedures are used in diagnosing and treating certain illnesses. These procedures use radioactive materials called radiopharmaceuticals. Examples of diseases treated with nuclear medicine procedures are hyperthyroidism, thyroid cancer, lymphomas, and bone pain from some types of cancer. The amount of radioactive materials used in diagnosing illnesses depends on the needs of the person and range from a small amount to a large amount.
