As the facilitator for IFMSA Professional Exchange Program, SCOPE CIMSA Indonesia holds the role to facilitate medical students all over Indonesia to have an experience with the world's largest exchange program for medical students all over the world.

A complete introductory review of global health--updated to reflect the latest issues and challenges The first edition of Understanding Global Health set a new information standard for this rapidly emerging subject. Written by a remarkable group of authors and contributors, this comprehensive, engagingly written text offers unmatched coverage of every important topic--from infectious disease to economics to war. Created with the non-specialist in mind, Understanding Global Health explores the current burden of disease in the world, how health is determined, and the problems faced by populations and health care workers around the world. The second edition has been thoroughly updated to include the most current information and timely topics. New chapters cover such topics as human trafficking, malaria and neglected tropical diseases, surgical issues in global health, and mental health. Every chapter includes Learning Objectives, Summary, Study Questions, and References and, in many instances, practical case examples. Thorough coverage of every important subject, including: Epidemiology, Biostatistics, and Surveillance Nutrition Primary Care in Global Health Tuberculosis and HIV/AIDS Education and Careers in Global Health Aging Populations and Chronic Illness Global Health Ethics

This unique introduction to the essentials of global health has been constructed by medical students from all over the world through the help of Medsin (now Students for Global Health) and the International Federation of Medical Students' Association (IFMSA). The global student and trainee author team, recruited and guided initially by Drs Dan and Felicity Knights (themselves students and officers of Medsin when work commenced), identified the key areas to be covered. Then the book they put together was edited by two experts in the field: Mr B Sethia and Professor Parveen Kumar. Royalties raised from this book go to a grant fund for student global health projects. Written by medical students and junior doctors from Students for Global Health and the International Federation of Medical Students' Association (IFMSA). Edited by two experts in the field, Mr B Sethia and Professor Parveen Kumar. Royalties go to a grant fund for student global health projects.

Developing Global Health Programming: A Guidebook for Medical and Professional Schools, 2nd edition is an essential text for any academic institution, administrator, faculty, or student interested in developing or expanding global health education and international programs. This text expands on the 1st edition and provides a comprehensive view of global health education that is useful for medical, nursing, dental, public health, and other professional schools. This book provides evidence, theory, and practical information to guide astute program development and gold standard practices. Topics covered include ethics, pre-departure training, competencies, partnership structures, and much more. In addition, need-to-know resources and networking opportunities are detailed. This authoritative text has over 90 contributors, including trainee authors guided by faculty editors through a mentorship model. Foreword by Andre Jacques Neusy, Co-Founder & CEO, Training for Health Equity Network (THEnet)

Two-sided matching provides a model of search processes such as those between firms and workers in labor markets or between buyers and sellers in auctions. This book gives a

comprehensive account of recent results concerning the game-theoretic analysis of two-sided matching. The focus of the book is on the stability of outcomes, on the incentives that different rules of organization give to agents, and on the constraints that these incentives impose on the ways such markets can be organized. The results for this wide range of related models and matching situations help clarify which conclusions depend on particular modeling assumptions and market conditions, and which are robust over a wide range of conditions. 'This book chronicles one of the outstanding success stories of the theory of games, a story in which the authors have played a major role: the theory and practice of matching markets ... The authors are to be warmly congratulated for this fine piece of work, which is quite unique in the game-theoretic literature.' From the Foreword by Robert Aumann

In this "meticulously researched" account (New York Times Book Review), a Pulitzer Prize-winning author examines the dangers of a failing public health system unequipped to handle large-scale global risks like a coronavirus pandemic. The New York Times bestselling author of *The Coming Plague*, Laurie Garrett takes on perhaps the most crucial global issue of our time in this eye-opening book. She asks: is our collective health in a state of decline? If so, how dire is this crisis and has the public health system itself contributed to it? Using riveting detail and finely-honed storytelling, exploring outbreaks around the world, Garrett exposes the underbelly of the world's globalization to find out if it can still be assumed that government can and will protect the people's health, or if that trust has been irrevocably broken. "A frightening vision of the future and a deeply unsettling one . . . a sober, scary book that not only limns the dangers posed by emerging diseases but also raises serious questions about two centuries' worth of Enlightenment beliefs in science and technology and progress." -- Michiko Kakutani, *The New York Times*

Completely revised and updated, this new edition of *The Medical Student Career Handbook* provides totally up-to-date information on the vast number of changes occurring in medical training. It is ideal for all medical students, especially those in their clinical years, and junior doctors. Medical student careers advisors will also find the information invaluable.

Global Health Training in Graduate Medical Education is a guide to help medical schools, residency programs, students, residents, fellows, educators and allied health professionals create, expand and improve global health education. Investigate the history of global health work, learn from the experience of established programs and health care leaders, seek out new educational resources, and consider the ethical implications of health work in communities at home and abroad.
