Thermal pollution, sometimes called "thermal enrichment," is the degradation of water quality by any process that changes ambient water temperature. A common cause of thermal pollution is the use of water as a coolant by power plants and industrial manufacturers. When water used as a coolant

Thermal pollution is the process of taking water from a body of water, using it to cool things like machines, and then dumping the water back to its source, while it is still warmed. The main effect of these problems is the rising rates of lung-related health issues, the rising average global temperature, and the loss of animal and plant
