business stakeholders and the dev teams building the software. In this book, author Gojko Adzic distills interviews with successful teams worldwide, sharing how they specify, develop, and deliver software, without defects, in short iterative delivery cycles. About the Technology Specification by Example is a collaborative method for specifying requirements and tests. Seven patterns, fully explored in this book, are key to making the method effective. The method has four main benefits: it produces living, reliable documentation; it defines expectations clearly and makes validation efficient; it reduces rework; and, above all, it assures delivery teams and business stakeholders that the software that's built is right for

Love is the surprising emotion that company builders cannot afford to ignore. Genuine, heartfelt devotion and loyalty from customers — yes, love — is what propels a select few companies ahead. Think about the products and companies that you really care about and how they make you feel. You do not merely like those products, you adore them. Consider your own emotions and a key insight is revealed: Love is central to business. Nobody talks about it, but it is obvious in hindsight. Lovability: How to Build a Business That People Love and Be Happy Doing It shares what Silicon Valley-based author and Aha! CEO Brian de Haaff knows from a career of founding successful technology companies and creating

award-winning products. He reveals the secret to the phenomenal growth of Aha! and the engine that powers lasting customer devotion — a set of principles that he pioneered and named The Responsive Method.

Lovability provides valuable lessons and actionable steps for product and company builders everywhere, including:

- Why you should rethink everything you know about building a business
- What a product really is
- The magic of finding what your customers truly desire
- How to turn business strategy and product roadmaps into customer love
- Why you should chase company value, not valuation
- Surveys to measure your company 's lovability

Brian de Haaff has spent the last 20 years focused on business strategy, product

management, and bringing disruptive technologies to market. And in preparation for writing this book, he interviewed well-known startup founders, product managers, executives, and CEOs at hundreds of name brand and agile organizations. Their experiences, along with headline-grabbing case studies (both inspiring successes and cautionary tales), will help readers discover how to build something that matters. Much has been written about how entrepreneurs build innovative products and successful businesses, but the author's message is original and refreshing. He convincingly explains that there is a better path forward — a people-first way grounded in love. In a business world that has increasingly emphasized hype over substance and get-

past known as Systems Analysis (and also Knowledge Elicitation). Requirements constitute the earliest phase of the software development cycle. Requirements are precise statements that reflect the needs of customers and users of an intended computer system, e.g. a word processor must include a spell-checker, security access is to be given to authorized personnel only, updates to customer information must be made every 10 seconds. Requirements engineering is being recognized as increasingly important - no other aspect of software engineering has enjoyed as much growth in recent years. More and more organizations are either improving their requirements engineering process or thinking about doing so.
