Women with disabilities encounter more frequent domestic abuse with a greater number of abusers. Health care workers and personal care attendants perpetrate abuse in these circumstances, and women with disabilities have fewer options for escaping the abusive situation.

Though we may no longer confine our understanding of women's health to reproduction and maternity care, women's health in Canada continues to be limited by knowledge gaps, political agendas, and fiscal restraints. This second edition of *Women's Health* provides a comprehensive picture of the state of women's health in Canada, tracing the emergence of the field and outlining some of the current challenges facing its advancement. The contributors--who include academics, health care professionals, and policy-makers--explore women's health in different social and geographical locations, the gendering of care work, and the ways in which research can influence health policy. Drawing on gender-based analysis and highlighting the diversity among women, this multidisciplinary collection illustrates the breadth of contemporary Canadian writing on women's health and calls for a renewed commitment to women's health advocacy. This revised edition has been thoroughly updated to reflect developments in research and recent changes in the social, political, and economic context. New chapters cover topics such as wait times, girls' health, and unpaid health care. Featuring questions for further thought and lists of recommended readings and websites, this unique text is a valuable resource for both students and researchers in the fields of women's studies, sociology, health sciences, and nursing.

While women comprise the largest segment of health workers, health consumers, and health decision-makers for their families and communities, it has often been difficult for women to make themselves heard. *Women's Health* focuses on women's health issues from multiple perspectives and draws upon research and practice that include both qualitative and quantitative methodologies in data collection and knowledge formation. *Women's Health* incorporates work that has been produced from grassroots investigations of women's health issues and addresses specific health issues, diversity issues, and a variety of issues previously unexplored. In an effort to exemplify alternative forms of knowledge collection, and the importance of inclusiveness, diversity, and realism when understanding the various facets of women's health, *Women's Health* also highlights the work of women whose voices may not normally be heard or recognized -- in a way that stretches beyond the traditional parameters of knowledge-sharing practices.

Brazil's leadership role in the fight against HIV has brought its public health system widespread praise. But the nation still faces serious health challenges and inequities. Though home to the world's second largest African-descendant population, Brazil failed to address many of its public health issues that disproportionately impact Afro-Brazilian women and men. Kia Lilly Caldwell draws on twenty years of engagement with activists, issues, and policy initiatives to document how the country's feminist health movement and black women's movement have fought for much-needed changes in women's health. Merging ethnography with a historical analysis of policies and programs, Caldwell offers a close examination of institutional and structural factors that have impacted the quest for gender and racial health equity in Brazil. As she shows, activists have played an essential role in policy development in areas ranging from maternal mortality to female sterilization. Caldwell's insightful portrait of the public health system also details how its weaknesses contribute to ongoing failures and challenges while also imperiling the advances that have been made.

In recent years, healthcare professionals have recognized the distinctly different healthcare needs and concerns of men and women. Women's health, in particular, has come into its own in the last two decades. In Canada, however, there has been little available in the way of a general text on women's health. This volume works toward filling that gap by providing a resource for teaching and understanding women's health in this country. To lay out the methodological and theoretical foundations for their study, editors Olena Hankivsky, Marina Morrow, and Colleen Varcoe bring together an interdisciplinary group of scholars and practitioners from economics, anthropology, sociology, nursing, political studies, women's studies, and psychology. Contributors draw on the rich history of the Canadian women's health movement, providing analysis of that history and of the emergent theory, policy, and practice. Aimed at undergraduate and graduate students as well as practitioners, the collection adopts an intersectional approach, looking closely at social factors such as gender, race, ethnicity, class, sexuality, and gender identity, and analysing how they relate both to each other and to women's health. Connections between the social, economic, and cultural contexts of women's lives and their physical, spiritual, and mental well-being are a primary focus. Providing a much needed resource for teachers, students, and practitioners of women's health in Canada, this comprehensive volume makes an important contribution to the literature.

An authoritative, state-of-the-art collection that brings together key experts to provide an overview of the field. This new paperback edition includes 3 new chapters on human resources and health, end-of-life care and complementary and alternative medicine as well as thorough updates to the introduction and conclusion.

Women and Health is a comprehensive reference that addresses health issues affecting women of all ages – from adolescence through maturity. It goes far beyond other books on this topic, which concentrate only on reproductive health, and has a truly international perspective. It covers key issues ranging from osteoporosis to breast cancer and other cancers, domestic violence, sexually transmitted diseases, occupational hazards, eating disorders, heart disease and other chronic illnesses, substance abuse, and societal and behavioral influences on health. In this second edition of Women and Health, chapters thoughtfully explore the current state of women's health and health care, including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions. All chapters have been extensively updated and emphasize the epidemiology of the condition – the etiology, occurrence, primary and secondary prevention (screening), risk factors, surveillance, changing trends over time, and critical analysis of the diagnostic and treatment options and controversies. Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners. Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women's health issues, as opposed to searching through thousands of journal articles Provides a common language for epidemiologists, public health practitioners, and women's health specialists to discuss the behavioral, cultural, and biological determinants of women's health Researchers and medical specialists will learn how the gender-specific risks and features of one organ system's diseases affect the health of other organ systems For example: Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease; Drugs developed for type 2 diabetes are now being used in chemoprevention Orients the non-gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans Professors teaching courses in women's health will use slides and additional materials to structure lectures/courses; students will use slides as a unique resource to study for exams

Numerous issues confront women's healthcare today, among them the medicalization of women's bodies, cosmetic genital surgery, violence against women, HIV, perinatal mental health disorders. This volume uniquely explores such difficult topics and others at the intersection of clinical practice, policy,

and bioethics in women's health care through a feminist ethics lens. With in-depth discussions of issues in women's reproductive health, it also broadens scholarship by responding to a wider array of ethical challenges that many women experience in accessing health care. Contributions touch on many themes previously tackled by feminist ethics, but in new, contemporary ways. Some chapters expand into new fields in the bioethics literature, such as the ethical issues related to the care of Indigenous women, uninsured refugees and immigrants, women engaged in sex work, and those with HIV at different life stages and perinatal mental health disorders. Authors seek to connect theory and practice with users of the health system by including women's voices in their research. Bringing to bear their experience in active clinical practice in medicine, nursing, and ethics, the authors contemplate new conceptual approaches to important issues in women's healthcare, and make ethical practice recommendations for those grappling with these issues. Topical and up-to-date, this book provides a valuable resource for physicians, nurses, clinical ethicists, and researchers working in some of the most critical areas of women's health and applied ethics today.

Thinking Women and Health Care Reform in Canada explores why health care is a woman's issue and seeks to address gender equity in health services. Written by members of Women and Health Care Reform (WHCR), this collection establishes the importance of including gender in discussions and decisions surrounding health sector reform. In twelve concise chapters, Thinking Women and Health Care Reform in Canada addresses a wide range of issues, including obesity, maternity care, mental health of health care workers, and private health insurance. This thought-provoking collection is an essential read for students and researchers in the fields of women's studies, health sciences, sociology, and nursing, as well as for anyone who is looking for a new picture of health care in Canada.
